ABSTRACT

Nevada Revised Statute 385.347, the School Accountability Law, requires that Nevada's school districts provide information to the public about the performance of the state's individual public schools and districts. This report reviews accountability information from 372 Nevada schools for the 1994-95 school year. Data are provided on the following subjects: progress toward goals; enrollment; attendance and truancy rates; dropout rates for grades 9-12; incidents involving violence, weapons, or distribution of controlled substances; counselor-student ratios; teacher-student ratios; average class size; teacher qualifications; academic achievement; standardized test results; parent participation; and expenditures per student. Overall, school districts are making steady progress in reporting individual items on school and district accountability reports. Three tables are included; the appendix contains 14 tables. (LMI)

Executive Summary

In 1993 the Nevada State Legislature passed Nevada Revised Statute 385.347. This law, commonly known as the Nevada School Accountability Law, provides the legislative framework under which all school districts in Nevada inform the public about their performance overall and about the performance of individual public schools within the district. School information is provided to the public via a set of reports, the most recent of which is described in this paper. Individual schools provided reports to their parents, and districts reported information about all schools in the district to news media sources and other interested parties.

The Nevada Department of Education developed a handbook to guide educators in creating accountability reports. The handbook was developed in 1993 after meetings with representatives of educator and parent associations, the legislature and news media, as well as private citizens. It was revised subsequent to similar meetings in the falls of 1994 and 1995. The handbook specifies the data items which appear in the report, and its development has been based on the requirements of the law, with input from the groups listed above.

This report is a review of accountability information from 372 schools in Nevada for the 1994-95 school year. Comprehensive accountability reports for that year were provided to the public by Nevada's 17 school districts in a timely manner during March 1996.

Most data which the handbook requests appeared in the reports generated by each district (see Tables 1 and 2). Two reporting areas which had been requested for the first time in the previous year's reports were well reported this time. They were the percentage of students taking CTBS/4 achievement tests and the number of incidents of violence, weapons possession and distribution of controlled substances. An entirely new element, truancy rates, as defined by the percentage of students at a school site having ten or more unexcused absences in the school year, was also extremely well reported. See Appendix C for district-by-district and school-by-school summaries of selected data items.

Reporting of school information to the public has progressively improved over the last three years. The next step in the process is the use of this information to more effectively guide site improvement plans at individual schools. Districts are asked to focus their evaluation reports (Part III reports) at the individual school level, to identify areas of outstanding performance as well as areas needing improvement, and to base their improvement plans upon identified needs. While a number of school districts have taken this school-level approach to the use of accountability information, others have not.

Introduction

Nevada Revised Statute 385.347, the School Accountability Law, requires that Nevada's school districts provide information to the public about the performance of the state's individual public schools, and about the performance of the districts. The law directs that school accountability be accomplished through a system of reports to the public. This law was revised during the 1995 Legislative session. The revisions made at that time are described below. The current version of the School Accountability Law is reproduced in Appendix A.

The School Accountability Law charges the State Superintendent of Public Instruction, in consultation with representatives of various educational associations in the State, with prescribing the forms for the reports and ensuring the implementation of a uniform system of reporting that provides comparable information for schools across the state. The Handbook for School Accountability Reporting (Smith, 1995) defines the reporting requirements which ensure this uniformity, and was provided to districts and individual schools to assist them in completing their reports. The State Superintendent is required to analyze the information submitted to the State Board and to make a report to the Legislature, on or before February 1 of each year, as to the effectiveness of the school accountability program. This report reflects the statewide review for the 1994-95 school year, which was the third year of school accountability reporting in Nevada.

The original School Accountability Handbook (Smith, 1994a, 1994b) was revised for the third year of reporting. Like the original, the revised Handbook (Smith, 1995) addresses the Department's charge of implementing a uniform system of reporting comparable accountability information for all of Nevada's public schools. The revised Handbook requests some additional information in the school accountability reports. Like previous versions, it reflects the efforts of educators and concerned citizens across the state of Nevada.

1995 Changes to NRS 385.347

NRS 385.347 was revised in the 1995 Legislative session to make reported information consistent with the law. Note should be made of changes from the original version of NRS 385.347. The law initially specified pupil achievement for each age and grade level. Age level reporting was eliminated as a reporting requirement because much student achievement information was already reported at grade levels, and a great deal of the age level information would have been included in the grade level reports.

NRS 385.347 also originally required reporting the ratio of pupils to teachers at each grade level. This was changed to request teacher/student ratios for grades K-6 only. At the secondary level, where a given student typically attends a number of different classes, average class sizes must now be reported for English, Mathematics, Science, and Social Science classes.

The 1993 version of NRS 385.347 specified reporting of graduation rates in each high school. However, it is difficult to determine graduation rates accurately (Smith, 1996). Given the problems most districts and states encounter with accurately determining graduation rates, graduation rates were replaced by annual school dropout rates overall and for grades 9-12.

NRS 385.347 originally specified reporting advancement rates for all grades. During the 1995 legislative session this requirement was deleted and the requirement to report truancy rates for all schools was inserted.

Finally, with the current report, incidents of violence, which had previously been lumped together as a single item, must be reported under four separate categories. Those categories are: violence to other students, violence to school staff, possession of weapons and distribution of controlled substances.

Reports Requested from School Districts

The School Accountability Handbook requested three sets of reports.

- The first set of reports, Individual School Accountability Reports, were developed for individual schools. Each report was to contain information about the school and the district as a whole. These reports were distributed to parents of students from each school and other individuals who requested the reports.
- The second set of reports, District-wide School Accountability Reports, contained information about each school in the district and the district as a whole. These reports were distributed to local news media, libraries and various local meeting places, the Legislative Counsel Bureau, and to other individuals who requested the information.

Those two sets of reports for school year 1994-95 are summarized in this paper.

- A third set of reports were to be developed by the districts. They required an analysis of the accountability process, describing any exemplary or problematic programs in the district at the school level, and an enumeration of the school district's efforts to address any

deficiencies noted. Appendix B presents a legal opinion provided by the Nevada Attorney General for the State Superintendent of Public Instruction regarding the requirements of NRS 385.347 with respect to this third report.

The three sets of reports were reviewed by a panel of educational scholars from both University of Nevada campuses (Review Panel, 1996). Some general findings will be discussed briefly in this report.

Separate Individual School Accountability Reports were required for most schools. School Accountability Reports were provided for 9 combined schools (all grades through twelve), 228 elementary schools, and 110 secondary schools. Schools with an average enrollment of less than eight students per grade in the previous year were not required to produce an Individual School Accountability Report. In the 17 reporting districts, twenty-five schools were not required to provide Individual School Accountability Reports. This number constitutes less than seven percent of the total number of regular schools. The small schools had enrollments ranging from 4 to 63 students.

Clark, Elko and Humboldt districts all had more than one such small school during the 1994-95 school year. In those cases, the districts combined the information from those schools into a Rural or Small Schools Accountability Report. Seventeen of the 25 schools were combined in such reports by Clark, Elko and Humboldt districts. All three schools in the Esmeralda district qualified as small schools, so Esmeralda met its school and district reporting requirements by providing a single districtwide report which combined information from all three schools. If there was only one small school in a district, that school was exempt from generating the Individual School report. However, the information for all such schools was to be included in district statistics reported in the Individual School Accountability Reports and in the Districtwide School Accountability Report.

Seven special education schools were exempt from providing Individual School Accountability Reports. However, the information for those schools must be included in district statistics used in the Individual School Accountability Reports and in the Districtwide School Accountability Report.

Data Elements of School Accountability Reports

The data elements in the Accountability Handbook were initially based on consideration of the practical issues involved in complying with the School Accountability Law as well as a determination of information provided at the time to the Department by Nevada school districts. Accountability programs already in place in other states were also

considered, as well as recommendations produced by a statewide committee formed in 1989 to address district-level accountability reporting.

The initial set of data elements and definitions was reviewed by two statewide committees: the Nevada Forum on School Accountability and the Nevada Technical Advisory Committee on School Accountability. The statewide Forum was convened in fall, 1993. Representatives from all school districts and from the business community were invited to participate. The Forum was comprised of representatives from fourteen school districts, the Legislature, the Nevada State Education Association, the Nevada Press Association, the Nevada Association of School Administrators, the Legislative Counsel Bureau, the Nevada School Boards Association, the Nevada Parent Teachers Association, the Nevada State Board of Education, private citizens, the University of Nevada, Far West Laboratory for Educational Research and Development, and the Nevada Department of Education.

The Forum's comments and recommendations were forwarded to the Technical Advisory Committee on School Accountability. The Technical Advisory Committee met in fall, 1993 and 1994 and made comments and recommendations to the State Superintendent on technical aspects of collecting information from schools in the 17 school districts in Nevada, and assuring consistency in the collection and reporting process. The Committee was comprised originally of representatives from eight school districts, the Nevada Association of School Administrators, the Legislative Counsel Bureau, the Nevada State Board of Education, the Nevada State Education Association, the Nevada Association of School Boards, and the Nevada Department of Education. The committee also met in fall of 1995 to address data collection and data reporting issues arising at that time.

Many data elements were initially considered for inclusion in the accountability reports. In choosing among possible data elements, it became necessary to strike a balance which would provide a useful amount of information to the reader without overwhelming her or him with detail. Those elements chosen were the ones judged to meet the requirements of the School Accountability Law and also to provide information of greatest concern to most parents in Nevada.

The statistical and textual information requested on the Individual School Accountability reports concerned the school and the district as a whole for School Year 1994-95. They included:

- School's Name, Principal's Name, and School Telephone Number;
- Principal's Highlights to review or list indicators of a school's

performance for the previous school year, such as: special, enrichment, remediation, or counseling programs; state and/or national recognition for schools; various student awards and performance indicators; grant awards and school-community partnerships; and/or any other indicators of school climate (e.g., information from school improvement activities);

- measurable/objectively identifiable Progress Toward Goals;
- Enrollment, Transiency Rates, and Annual Change in Enrollment;
- Daily Attendance Rate and Truancy Rates;
- Dropout Rates for grades 9-12;
- Incidents of Student Involvement with School Violence, Weapons, or Distribution of Controlled Substances, specifically broken down into the following categories:
 - Violence to other students,
 - Violence to school staff,
 - Possession of weapons, and
 - Distribution of controlled substances;
- Counselor/Student Ratios for schools and Teacher/Student Ratios for grades K-6;
- Average Class Sizes for core areas in grades 7-12;
- Teacher's Experience and Teacher Degrees;
- Percentage of Teachers Completely Within Area of License and Endorsement and, for grades 7-12, Percentage of Classes in Core Areas Taught by Teachers Outside Areas of License and Endorsement;
- Percent of Students Taking CTBS/4 Test, Average National Percentile Rank for each grade on the reading, mathematics, and language sections of the state-required standardized tests, and the Percentages of Students in the National Top and Bottom Quarter in each grade;
- Percentage of Students Proficient for Each Writing Trait on the statewide writing exam;
- Percentage of Students Passing Each Area of High School Proficiency Exam;

- Percentage of Graduating Class that Took College Entrance Exams and Average Scores;
- results of other district-wide norm referenced or criterion referenced tests;
- Percentage of Total Enrollment Participating in Special or Highlighted Programs as listed in the Handbook;
- Percentage of Students Whose Parents Attended Formally Scheduled Parent-Teacher Conferences and other parental involvement indicators; and
- Expenditures Per Student in Areas of Instruction, Administration, Building Operation, Staff Support, and Student Support and Sources of Revenues and Resources.

Most of the above information was also required for the Districtwide School Accountability Reports. Some school level information was replaced by relevant district level information. The school name, principal's name, and school telephone number on the individual school reports were replaced with the school district's name, superintendent's name, and district office telephone number. The principal's highlights and school progress toward goals on the school reports were replaced by Superintendent's Review, District Highlights, and district Progress Toward Goals. The district-wide reports also were to include the Secondary Curriculum listings for grades 7-12. Otherwise, the districtwide reports included all school-level information for each school and the district as a whole.

School Districts' Reporting on School Accountability

Individual school and districtwide accountability reports for the 1994-95 school year were submitted by the districts in a timely fashion in the spring of 1996, and were received by the Department of Education.

Selected statistical information for districts and schools in each district appears in Appendix C. Tables C1 through C4 provide district information. Tables C5 (see pp. 32-43) and C10 (pp. 87-94) provide selected school characteristics for elementary schools and secondary schools, respectively. Tables C6 (pp. 44-54) and C11 (pp. 95-103) provide classroom information for elementary schools and secondary schools, respectively. Tables C7 (pp. 55-67) and C12 (pp. 104-112) provide percentages of enrollment participating in special programs for elementary and secondary schools. Tables C8 (pp. 68-79) and C13 (pp. 113-121) provide student achievement information for elementary and secondary schools. Tables C9 (pp. 80-86) and C14 (pp. 122-128) respectively provide information about

truancy rates and incidences of violence for elementary schools, and about truancy rates, dropout rates and incidents of violence for secondary schools.

On Appendix C tables, dashes indicate that the information did not apply to the school. N.R. indicates that the information was not reported on the school reports or could not be determined from the graphs provided in the reports. On their district reports, some districts either segregated elementary and secondary information or broke information up by grades. On the district tables in Appendix C, some data for districts was estimated, as noted on the tables, by combining information from grades, educational level (e.g., middle school and high school) or schools.

Impact on School Districts

Each school district printed and distributed its school and district accountability reports using available funds. Thirteen districts' estimates of the dollar amount and staff time in hours needed to produce the 1994-95 school year accountability reports totalled over \$240,413 and 7,924 hours respectively.

School district comments and suggestions for improving the accountability system were included in school evaluation reports provided by districts to the State Board of Education and the State Superintendent as required by NRS 385.347. The items on improving the accountability system are listed in Part III of the Accountability Handbook. They include:

- areas where required information was not available for the school reports;
- plans for providing the required, but presently missing, information in next year's reports to the public;
- fiscal and non-fiscal (e.g., principal/staff training) impact on the district of providing the reports, including the District Impact Survey, and
- recommendations for improving the accountability process at the state, district and school level.

Several districts reported required areas that had not been provided in their school and/or district reports. Those districts also provided plans for making that information available in upcoming reporting periods. Interestingly, a number of districts which had not reported one or more required items indicated that they believed all required information had been submitted. Apparently some confusion exists regarding which data

elements need to be collected and reported. Hopefully the Nevada Report Card software program will eliminate some of the confusion. This software program is a windows based program which leads the user through a set of screens. The screens prompt the user for entry of relevant information, then the program calculates summary values as necessary and prints out the result in compact, standardized format. It can also transfer information onto floppy disks or other magnetic media in a format suitable for aggregation in districtwide and statewide databases.

A number of comments were directed to the financial expense and time required to produce the school and district accountability reports, and to the desirability of simplifying the reporting process. Again, the Nevada Report Card software may be of assistance in this regard.

As was the case in the last report, (Smith, 1996), opinion was divided over the local impact of public accountability reporting. Some districts reported that it made a positive change, while others felt it had little local impact. Some of the other issues raised by districts were:

- the need to standardize the determination of which students are to be exempted from achievement tests and to ensure that all districts report the percentage of students receiving such tests;
- difficulty in applying some of the data element calculations in small rural schools;
- the need to provide some baseline measures of student preparedness;
- The duplication of effort involved in sending the same information to the Department of Education for more than one report, and possible desirability of having the Department of Education compile information and distribute to districts, and
- the desirability of getting needed information from the Department of Education in the spring of the year for which the reports are to be done.

With regard to the final issue, the Department of Education has made arrangements to convene a meeting of the Technical Advisory Committee on School Accountability in the spring of 1997, for the purpose of reviewing and resolving questions arising during the completion of the 1994-95 and 1995-96 accountability reports. This should help districts to organize their data collection and reporting efforts in a proactive fashion.

School Accountability and Evaluation Reports

In addition to the information on improving the accountability system, the school evaluation reports submitted by each district were also to include school evaluation information. The school evaluation information listed in Part III of the Accountability Handbook is as follows:

- identification of areas of exemplary achievement at the school site and/or areas of improvement in outcomes from those reported in the previous year;
- a review of the evidence of exemplary achievement and/or performance improvements at the school site;
- any model programs or activities at the school site that are believed to be responsible for the areas of exemplary or improved performance at that site;
- an indication of specific areas where the need for improvement in performance at the school site were identified;
- a review of the evidence for any deficiencies identified at the site;
- district/school efforts to impact those areas for improvement at the school site.

In October 1996, the Nevada Department of Education commissioned a panel of scholars from the Colleges of Education at the two Universities of Nevada to review school, district, and evaluation reports and comment on the use of the information by schools and districts in program planning.

The panel did not comment on performance of students across the state, as a statewide database was not provided at the time they met. Instead, they focused specifically on school and district reports and evaluation reports.

Overall, the panel (Review Panel, 1996) found that most districts had made a conscientious, good faith effort to provide information required for the school and district reports, even when that information was not precisely in the form required by the Accountability Handbook. Tables 1 and 2 in this section are from the Panel's report, and list required information that the Panel looked for in the original individual school and district reports. Please note that in a number of instances, school districts provided additional or corrected information to the Department for insertion in the data tables in Appendix C. This information was provided after the school accountability reports were made public and after the panel met.

As can be seen from a visual inspection of Table 1, most data items were reported at the school level by the majority of districts. The percent of students tested on the CTBS/4 test was the data item most frequently missed at the school level, with Eureka, Mineral, Pershing and Storey not reporting that item. The panel concluded that the districts had made progress in reporting student achievement since the 1993-94 accountability report when only seven districts reported the testing on the CTBS/4. As in the previous year, the panel noted a large variation in the percentage of students who were reported as having been tested. The panel recommended development of consistent standards specifying which students should be included in statewide achievement testing.

Truancy rates were also reported at the school level by almost all of the districts, although a few districts (Clark, Eureka and Washoe) reported this item only at the secondary level.

The current reporting period was also the first one in which incidents of school violence were required to be broken down into the four categories listed above, and overall reporting of these categories of incidents was extremely good. Only Eureka reported no information at all on this subject, Clark County reported the information for middle schools and high schools, and Mineral County reported a districtwide figure.

Some inconsistency is apparent in reporting the percent of students represented by parents, guardians or others at parent teacher conferences. Six districts -- Carson City, Clark, Douglas, Elko, Eureka and Washoe -- reported this item only or mostly for elementary schools. This is because those districts don't customarily hold scheduled parent teacher conferences at the high school and/or middle school level.

At the district level, Table 2 shows that most items were reported. Those which were most consistently nonreported were the percent of students included in CTBS/4 testing, and the percent of students represented at a parent-teacher conference. Most districts not reporting the latter item were those reporting the item primarily or only at the elementary level in the school reports. Again, in a number of districts, parent teacher conferences are not regularly scheduled at the high school level, or middle school/high school levels. This no doubt accounts for some of the variability in percentages reported at the district level for attendance at parent teacher conferences. Most of the districts reporting percentages lower than 90% on this item were districts that reported the percent for all their schools, elementary and secondary. Conversely, a number of districts which didn't provide a districtwide figure for this data item (e.g., Clark and Washoe Counties) are among those which don't customarily schedule parent teacher conferences for all children at the high school, or high school/middle school level.

At the district level, information on truancy rates and incidents of violence were generally well reported, even though truancy was a new item with this report and the reporting classifications for incidents of violence were new.

With respect to the school evaluation reports (Part III of the Accountability Handbook) the Review Panel found a far lower level of reporting than for the school and district reports (Parts I and II of the Accountability Handbook), with only 10 of the 17 districts submitting complete Part III reports by the time the panel convened in October. Those districts were Carson City, Churchill, Clark, Douglas, Elko, Lincoln, Lyon, Nye, Washoe and White Pine. Of the remaining districts, Mineral and Humboldt counties provided information to the Department after the panel had completed its review. Table 3 in this section presents a summary of the panel's findings on Part III reporting. The panel particularly commended Carson City, Douglas and Nye districts for using school accountability data proactively to create school improvement plans which were clearly related to student outcomes. The panel also commended Lincoln County for their progress in using accountability data in their school and district planning process. The panel made two specific recommendations for the next year's use of school accountability findings:

- Planning for improvement needs to occur at the individual school level as well as the district level.
- School site plans should clearly relate their plans for improvement to accountability data. In those instances when priorities for improvement are not based on accountability data, schools need to describe how their priorities were set and provide a rationale for them.

Additionally, the panel compared each district's comments with school information reported in school reports. Their comments at the school level are detailed and beyond the scope of the present paper. The panel's report is available through the Fiscal and Accountability Team of the Nevada Department of Education. The report has many useful observations for using accountability data in school improvement planning. It may be especially useful to districts where the evaluation reports did not focus comments at the school level.

TABLE 3. PART III. EVALUATION OF ACCOUNTABILITY FINDINGS

The shaded blocks below indicate which districts had provided these elements in their Part III Reports by October 1, 1996. Though the handbook directs that these elements are to be reported for each school, the shaded cells also include districts that reported on these factors on a districtwide basis only. The analyses of each district's reports which follow recommend school-level consideration for those that reported only at a district level. The two districts which have only one block shaded did not submit a Part III Report as such, but mentioned these items in memos submitted to the Nevada Department of Education.

	Carson City	Chur- chill	Clark	Doug- las	Elko	Esmer- alda	Eur- eka	Hum- boldt	Lan- der	Lin- coln	Lyon	Min- eral	Nye	Persh- ing	Storey	Washoe	White Pine
a. Identification of areas of exemplary achievement at the school site and/or areas of improvement in outcomes from those reported in previous year																	
b. A review of the evidence of exemplary achievement and/or performance improvements at the school site																	
c. Any model programs or activities at the school site that are believed to be responsible for the areas of exemplary performance or the improved performance at that site																	
d. Indication of specific areas where the need for improvement in performance at the school site were identified																	
e. A review of the evidence for any deficiencies identified at the site																	
f. District/school efforts to impact those areas for improvement at the school site																	

Report Summary

Overall, districts are making steady progress in reporting individual items on school and district accountability reports. The majority of the districts provided carefully formatted and detailed school and district reports, and it is evident that an enormous amount of effort went into their preparation. The Department has spearheaded the development of a software application, the Nevada Report Card software, which should make the preparation of professional quality school reports easier for the districts and also standardize the calculation of summary information. That software has been beta tested by a number of districts and is available for use for preparation of school and district reports for school year 1995-96, which must be issued by the end of March 1997.

Several new or modified data areas -- incidents of violence, percentages taking CTBS/4 tests and truancy rates -- were reported by most of the districts. An inconsistency surfaced this year between elementary and secondary schools in some districts in reporting parental involvement. The measure specified in the Accountability Handbook is the percentage of students represented by a parent or guardian at a parent teacher conference. In a number of districts, parent teacher conferences are not regularly scheduled at the high school level, or middle school/high school levels. This no doubt accounts for some of the variability in percentages reported at the district level for attendance at parent teacher conferences.

Schools and districts are now providing comprehensive information on school goals and characteristics as a matter of course. The next step is for that information to be used at the school level to formulate and guide site improvement plans. A number of districts are doing this to some extent, and several were explicitly commended for such efforts by the Review Panel. At the school, district and Department of Education level, future efforts in support of school improvement programs must look at school accountability findings at the various schools to identify areas for improvement in school characteristics and student performance. One way in which the Department of Education might aid such efforts would be to put members of yearly review panels directly in touch with the districts which they review. This would provide more direct feedback and assistance to the districts in question. Additionally, as funding becomes available, the Department will provide a person or persons to provide ongoing assistance to schools and districts in using their accountability data to inform and guide school improvement efforts.

WESTLAW Topic No. 345.

C.J.S. Schools and School Districts §§ 86 to

91.

PROGRAM FOR ACCOUNTABILITY OF
SCHOOL DISTRICT**385.347 Establishment; reports; duties of superintendent of public instruction.**

1. The board of trustees of each school district in this state, in cooperation with associations recognized by the state board as representing licensed personnel in education in the district, shall adopt a program providing for the accountability of the school district to the residents of the district and to the state board for the quality of the schools and the educational achievement of the pupils in the district.

2. The board of trustees of each school district shall, on or before March 31 of each year, report to the residents of the district concerning:

(a) The educational goals and objectives of the school district.

(b) Pupil achievement for grades 4, 8 and 11 for each school in the district and the district as a whole. Unless otherwise directed by the department, the board of trustees of the district shall base its report on the results of the examinations administered pursuant to NRS 389.015 and shall compare the results of those examinations for the current school year with those of previous school years. In addition, the board shall also report the results of other examinations of pupil achievement administered to each pupil in the school district in grades other than 4, 8 and 11. The results of these examinations for the current school year must be compared with those of previous school years.

(c) The ratio of pupils to teachers in kindergarten and at each grade level for each elementary school in the district and the district as a whole, the average class size for each required course of study for each secondary school in the district and the district as a whole, and other data concerning licensed and unlicensed employees of the school district.

(d) A comparison of the types of classes that each teacher has been assigned to teach with the qualifications and licensure of the teacher, for each school in the district and the district as a whole.

(e) The total expenditure per pupil for each school in the district and the district as a whole.

(f) The curriculum used by the school district, including any special programs for pupils at an individual school.

(g) Records of the attendance and truancy of pupils in all grades, for each school in the district and the district as a whole.

(h) The annual rate of pupils who drop out of school in grades 9 to 12, inclusive, for each such grade, for each school in the district and for the district as a whole.

(i) Efforts made by the school district and by each school in the district to increase communication with the parents of pupils in the district.

(j) Records of incidents involving weapons or violence for each school in the district.

(k) Records of the suspension and expulsion of pupils required or authorized pursuant to NRS 392.466 and 392.467.

(l) The transiency rate of pupils for each school in the district and the district as a whole.

385.355

STATE ORGANIZATION

(m) Each source of funding for the school district.
 (n) Such other information as is directed by the superintendent of public instruction.

3. The superintendent of public instruction shall:

(a) Prescribe forms for the reports required pursuant to subsection 2 and provide the forms to the respective school districts.

(b) Provide statistical information and technical assistance to the school districts to ensure that the reports provide comparable information with respect to each school in each district and among the districts.

(c) Consult with a representative of:

- (1) The Nevada State Education Association;
- (2) The Nevada Association of School Boards;
- (3) The Nevada Association of School Administrators; and
- (4) The Nevada Parent Teachers Association.

concerning the program and consider any advice or recommendations submitted by the representatives with respect to the program.

4. On or before April 15 of each year, the board of trustees of each school district shall submit to the state board the report made pursuant to subsection 2. On or before June 15 of each year, the board of trustees of each school district shall submit to the state board:

(a) A separate report summarizing the effectiveness of the district's program of accountability during the school year; and

(b) A description of the efforts the district has made to correct deficiencies identified in the report submitted pursuant to paragraph (a).

5. On or before February 1 of each year, the superintendent of public instruction shall analyze the information submitted to the state board and report to the legislature concerning the effectiveness of the programs of accountability adopted pursuant to this section. In even-numbered years, the report must be submitted to the legislative commission.

(Added to NRS by 1989, 2117; A 1993, 2745; 1995, 1741, 1744)

UNLAWFUL ACTS

385.355 Tests of general educational development: Disclosure of questions and answers prohibited; exceptions. It is unlawful to disclose the questions contained in tests of general educational development and the approved answers used for grading the tests except:

1. To the extent that disclosure is required in the department's administration of the tests.

2. That a disclosure may be made to a state officer who is a member of the executive or legislative branch to the extent that it is related to the performance of that officer's duties.

BROOKE A. NIELSEN
Assistant Attorney General

November 15, 1993

Eugene T. Paslov, Ph.D.
Superintendent of Public Instruction
Department of Education
400 West King Street
Carson City, Nevada 89710

Dear Dr. Paslov:

You have asked this office for an opinion regarding NRS 385.347, as amended by Act of June 1, 1993, ch. 644, § 1, 1992 Nev. Stat. 2745 ("Senate Bill 511"). A difference of opinion was raised in a discussion between your office and local school district superintendents. One school district has interpreted this section to mean that the district must describe efforts to correct deficiencies in its system of accountability, not efforts to correct deficiencies that have been identified at the school sites. The interpretation will affect the type of information included in the report to the legislature and will impact local school districts' planning for compliance with the reporting requirement.

QUESTION

Is it the meaning of NRS 385.347(4) that each district shall identify deficiencies and describe efforts to correct deficiencies:

- 1) In the system of accountability reporting; or
- 2) At the school sites, based upon an analysis and interpretation of the data reported under this statute?

Eugene T. Paslov, Ph.D.
 November 15, 1993
 Page 2

ANALYSIS

NRS 385.347, sometimes known as the school accountability law, was first adopted by our legislature in 1989. Each of the 17 school districts reported district-wide data or information to the parents and community it served and to the State Superintendent of Public Instruction pursuant to the law. In the 1993 session of the legislature, the law was amended to provide refinements and to specify that the data or information shall be reported for each school in the district rather than for the district as a whole.

Subsection (4) of NRS 385.347, as amended by Senate Bill 511, provides that:

4. On or before April 15 of each year, the board of trustees of each school district shall submit to the state board the report made pursuant to subsection 2. On or before June 15 of each year, the board of trustees of each school district shall submit to the state board:

- (a) A separate report summarizing the effectiveness of the district's program of accountability during the school year; and
- (b) A description of the efforts the district has made to correct deficiencies identified in the report submitted pursuant to paragraph (a). [Emphasis added.]

If the language of the statute is plain and unambiguous, there is no room for construction. *Atlantic Commercial Dev. Corp. v. Boyles*, 103 Nev. 35, 38, 732 P.2d 1360 (1987). An examination of the language of the law begins with subsection (4)(a) which calls for a report of the effectiveness of the school district's "program of accountability." The key to our analysis is the description of "program of accountability" found in subsection 1 of NRS 385.347, as amended by Senate Bill 511. It states that the board of trustees shall "adopt a program providing for the accountability of the school district . . . for the quality of the schools and the educational achievement of the pupils in the district." *Id.* From the description we glean that the program of accountability is not merely the methodology for gathering and reporting the data. The deficiencies identified in the report will be deficiencies in the "quality of the schools and the educational achievement of the pupils in the district." *Id.* The effectiveness of the program would be how it affects the quality of the schools and the educational achievement of the pupils. In addition, whether the information or data constitutes a deficiency is a determination to be made by the local trustees from the data or information gathered pursuant to the law.

CONCLUSION

NRS 385.347, as amended by Senate Bill 511, requires that each school district identify deficiencies and describe efforts to correct deficiencies in the quality of schools and the educational achievement of pupils at school sites based upon the analysis and interpretation of the data reported pursuant to this statute.

Cordially,
